Math 1300-005 - Spring 2017

Limits Involving Infinity - 2/1/17

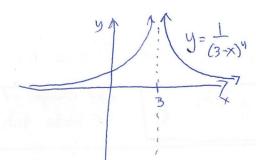

Guidelines: Please work in groups of two or three. Please show all work and clearly denote your answer.

1. Compute the following limits.

(a)
$$\lim_{x \to 3} \frac{7 - x}{(3 - x)^4} = \lim_{x \to 7} \left[(7 - x) \cdot (3 - x)^4 \right]$$

· We cannot immediately use a limit law. Itowever, note that lim (7-x) = 4.

· Now, lets graph y= 1/(x-3) 4 = 1/(x-3) 4 = 1/(x-3) 4.

 $\int_{-22}^{12} \left(y = \frac{1}{(3-x)^4} \right) = 0$ from the profuse.

Remember, on DNE, but since RHI= LHL, we can, in an abose of notation, write

 $\lim_{x \to 3} \left[(7-x) \cdot \frac{1}{(3-x)^{4}} \right] = \lim_{x \to 73} \left[(7-x) \cdot \lim_{x \to 3} \left[\frac{1}{(3-x)^{4}} \right]$ (b) $\lim_{x \to \infty} \frac{x^3 - 5x}{2x^3 - x^2 + 4}$

denominator are egual, we can simply take the ration of coefficients 3 a sontence

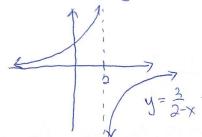

. Long Solution: The highest power in the denominator 13 x3, 50

$$\lim_{x \to \infty} \frac{x^3 - 5x}{2x^3 - x^2 + 4} = \lim_{x \to \infty} \frac{\frac{x^3}{x^3} - \frac{5}{x^3}}{\frac{2x^3}{x^3} - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3} + 4} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}{x^3}} = \lim_{x \to \infty} \frac{1 - \frac{5}{x^3}}{2 - \frac{x^2}$$

- 2. Compute the following limits.
 - (a) $\lim_{x\to 2^+} e^{3/(2-x)}$ [Hint: first consider $\lim_{x\to 2^+} 3/(2-x)$]
 - · Sots first draw 4= 2-x,

$$\frac{3}{y=\frac{3}{2-x}}$$
, so $\lim_{x\to 2^+} \frac{3}{2-x} = -\infty$.

. Using the above, let $t = \frac{3}{2-x}$. Then as $x \to 2^+$, $t \to -\infty$, so

$$\lim_{x\to 2^+} e^{3(x-x)} = \lim_{x\to 2^+} e^{+} = 0, \text{ since } 0 \text{ is a h-a. for } e^{x}$$

$$\lim_{x\to 2^+} e^{3(x-x)} = \lim_{x\to 2^+} e^{3(x-x)} = 0, \text{ see example } 7 \text{ in the book } 8$$

$$\lim_{x\to 2^+} e^{3(x-x)} = 0, \text{ for another such example.}$$

(b)
$$\lim_{x \to \infty} \frac{x + x^3 + x^5}{1 - x^2 + x^4}$$

· Quick Solution: since the largest power in the numerator is greater than the layest power in the denominator,

$$\lim_{X \to \infty} \frac{X + X^3 + X^5}{1 - X^3 + X^4} = \boxed{0}$$

· Long Solution: X" is the largest power of x in the denominator, so

$$\lim_{X \to \infty} \frac{X + X^3 + X^5}{1 - X^3 + X^4} = \lim_{X \to \infty} \frac{\frac{X}{X^4} + \frac{X^3}{X^4} + \frac{X^5}{X^4}}{\frac{1}{X^4} - \frac{X^2}{X^4} + \frac{X^4}{X^4}} = \lim_{X \to \infty} \frac{\frac{1}{X^3} + \frac{1}{X^4} + X}{\frac{1}{X^4} - \frac{1}{X^2} + \frac{1}{X^4}}$$
