Math 1300-005 - Spring 2017

Introduction to Continuity - 1/30/17

Guidelines: Please work in groups of two or three. Please show all work and clearly denote your answer.

1. Find the numbers, if any, at which the following functions are discontinuous. Explain your answer by showing which part of the definition of continuity the function fails to satisfy.

(a)
$$f(x) = \begin{cases} \frac{2x^2 - 5x - 3}{x - 3} & \text{if } x \neq 3\\ 6 & \text{if } x = 3 \end{cases}$$

we need only check continuity at x=3:

$$2 \lim_{x \to 3} f(x) = \lim_{x \to 3} \frac{2x^2 - 5x - 3}{x - 3} = \lim_{x \to 3} \frac{(2x + 1)(x/3)}{x - 3} = 7$$

(b)
$$g(x) = \begin{cases} x+1 & \text{if } x < 0 \\ e^x & \text{if } 0 \le x \le 1 \\ 2-x & \text{if } x > 1 \end{cases}$$

places where f switches

we need only only check continuity at a=0 and a=1

a=0

(a)
$$\lim_{x\to 0^{-}} f(x) = \lim_{x\to 0^{-}} (x+1) = 1$$

 $\lim_{x\to 0^{+}} f(x) = \lim_{x\to 0^{+}} e^{x} = 1$

$$a=1$$
 $C(1)=C'=C$ 150 defined at $a=1$

(2)
$$\lim_{x \to 1^+} f(x) = \lim_{x \to 1^+} e^x = e$$

 $\lim_{x \to 1^+} f(x) = \lim_{x \to 1^+} (2-x) = 2-1 = 1$
Since $e \neq 1$, we have $\lim_{x \to 1^+} e^x = e$

SINIE CFI, We have LHLFRHL 30 Rm f(x) DNE. Henre

RB discontinuous at a=1 only

2. For what value of the constant c is the function f continuous on $(-\infty, \infty)$?

$$f(x) = \begin{cases} cx^2 + 2x & \text{if } x < 2\\ x^3 - cx & \text{if } x \ge 2 \end{cases}$$

We need only verify continuity at a=2.

(a)
$$\lim_{x \to 2^{-}} f(x) = \lim_{x \to 2^{-}} (cx^{a} + 2x) = 4c + 24$$

 $\lim_{x \to 2^{+}} f(x) = \lim_{x \to 2^{+}} (x^{3} - cx) = 8 - 2c$

We need RHL=LHL 50 8-2C=4C+4 <> 4=6C,50 C= =

3. Find the values of a and b that make g continuous on $(-\infty, \infty)$.

$$g(x) = \begin{cases} \frac{x^2 - 4}{x - 2} & \text{if } x < 2\\ ax^2 - bx + 3 & \text{if } 2 \le x < 3\\ 2x - a + b & \text{if } x \ge 3 \end{cases}$$
to a hard for Mathern 1 but good to practice

we must verify 9 B cont. at x=2 and x=3.

(a)
$$\lim_{x \to 2^{-}} g(x) = \lim_{x \to 2^{-}} \frac{x^{2} - y}{x - 2} = \lim_{x \to 2^{-}} \frac{(x + 2)(x/2)}{x/2}$$

$$\lim_{x \to at} g(x) = \lim_{x \to at} (ax^2 - bx + 3) = 4a - 2b + 3.$$

(a)
$$\lim_{x \to 3^{-}} g(x) = \lim_{x \to 3^{-}} (ax^{2}bx + 3) = 9a - 3b + 3$$

 $\lim_{x \to 3^{-}} g(x) = \lim_{x \to 3^{+}} (2x - a + b) = 6 - 6 + b$
2

50 for Lift = Rift we need $9a - 3b + 3 = 6 - 6 + b$

To get continuity at both x=2 and x=3, we have to simultaneasty some 2 equations for 2 onknowns

$$4 = 4a - 2b + 3$$
 (1)
 $9a - 3b + 3 = 6 - a + b$ (2)

solve

Rearrange 1 gives Ha-2b=1,50 solve

(1) 1= 4a-2b 3 you should know how to
(2) 3=10a-4b 3 solve this from high school

Solving 1 for a gives
$$a = \frac{1+2b}{4}$$
, plug this into (2) $3 = 10(\frac{1+2b}{4}) - 2b - 7$ $b = \frac{1}{6}$ so $a = \frac{1}{3}$
